Project Design Phase-II Technology Stack (Architecture & Stack)

Date	03 October 2022
Team ID	PNT2022TMID35530
Project Name	Project - Developing a Flight Delay Prediction Model using Machine Learning
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table 1 & table 2

Guidelines:

- 1. Include all the processes (As an application logic / Technology Block)
- 2. Provide infrastructural demarcation (Local / Cloud)
- 3. Indicate external interfaces (third party API's etc.)
- 4. Indicate Data Storage components / services
- 5. Indicate interface to machine learning models (if applicable)

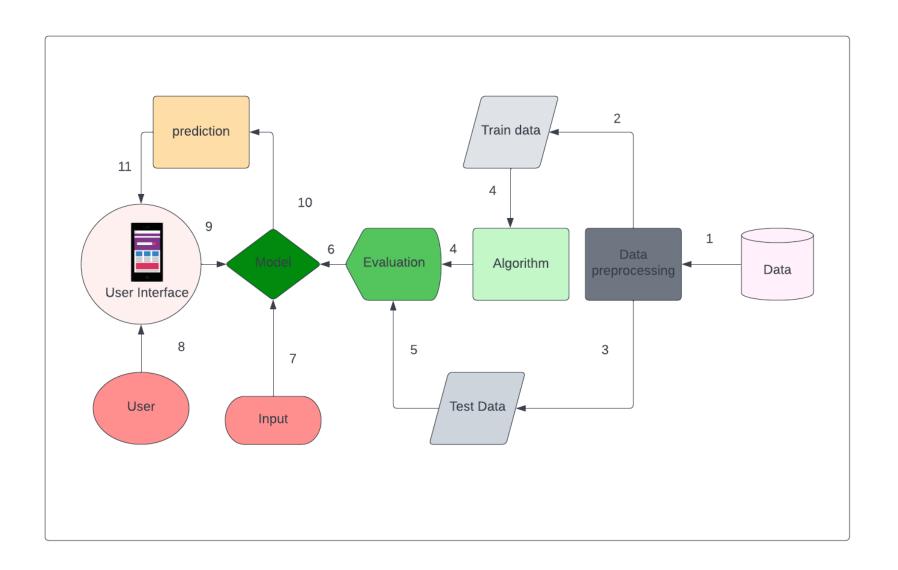

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	User interacts using web application Web UI	HTML, CSS, JavaScript ,Flask
2.	Application Logic-1	Logic for a process in the application	Python (numpy libraries)
3.	Application Logic-2	Logic for a process in the application	Python, Java
4.	Application Logic-3	Logic for model building	Machine learning model , random forest algorithm
5.	Data Preprocessing	To remove noise	Pandas , numpy
6.	Database	Database contains the user information and flight details	Mysql
7.	File Storage	File storage requirements	IBM Block Storage or Other Storage Service or Local Filesystem
8.	External API-1	Purpose of External API used in the application	Email API etc
9.	Machine Learning Model	Better accuracy	Random forest
10.	Infrastructure (Server / Cloud)	Application Deployment on Local System	IBM cloud

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	It is used to build almost any type of website from content management systems and wikis through to social networks and news sites	Python, Flask
2.	Security Implementations	It is used to identify the threats in the system, To measure the potential vulnerabilities of the system.	Encryptions, Risk assessment, Authentication

S.No	Characteristics	Description	Technology
3	Scalable Architecture	To determine the user limit for the web	Scalability testing
4.	Availability	Running an application for a planned period of time, collecting failure events and repair times	Load Testing, Endurance Testing
5.	Performance	Determines the behaviour of web application when it receives extreme variations in Traffic	Spike testing, stress testing
